

Achref Ferjani

DevOps · Cybersecurity · Software Engineer

Tunis, Manouba +216 25 708 778 cy1ingachref@gmail.com github.com/cy1ingachref

SUMMARY

DevOps-minded cybersecurity and software engineering student who builds the pipelines and the guardrails. I automate infrastructure, harden it, and ship software through CI/CD with security baked in. Recent experience spans a 2-month cybersecurity internship covering penetration testing and SOC analysis, plus personal labs with Docker, Linux, cloud, and Python tooling.

EXPERIENCE

Cybersecurity Intern — Penetration Testing & SOC

2025 · 2 months

Security / SOC Placement

- Performed web and network penetration tests (recon, scanning, exploitation) in a lab using Burp Suite, Nmap, and Metasploit.
- Monitored live traffic in a SOC setting with Wireshark and SIEM alert triage; documented findings and drafted remediation steps.
- Assessed web apps for OWASP Top 10 issues (XSS, SQLi, misconfig) and wrote concise vulnerability reports.
- Hardened a Linux host (SSH, firewall, logging) and built a small detection-use-case playbook.

EDUCATION

Bachelor in Computer Systems Engineering

2024 — Present

ISSATM — Bizerte

Focus on Cybersecurity and Data/Computer Network Engineering. Relevant coursework: Network Security, Computer Networks, Operating Systems, Data Structures & Algorithms, Data Communications.

SKILLS

DevOps & Cloud

- Docker
- CI/CD (GitHub Actions)
- Linux / Bash
- Terraform
- AWS (EC2, S3)
- Nginx / Reverse Proxy
- Git & GitOps
- Systemd / Logging

Cybersecurity

- Penetration Testing
- SOC / SIEM
- Wireshark / Packet Analysis
- Burp Suite
- Nmap / Network Scanning
- OWASP Top 10
- Linux Hardening
- TryHackMe / CTF

Software Engineering

- Python
- JavaScript / Node.js
- C / C++
- Java
- SQL / PL-SQL
- REST APIs
- HTML / CSS
- Arduino / ESP32

PROJECTS

Home Lab: Automated Secure Infra

Personal

Docker · Linux · CI/CD

Containerized services behind a hardened Nginx reverse proxy with automated backups and a GitHub Actions pipeline for deploys.

Network Packet Analyzer

Python

Scapy · Wireshark

CLI tool that captures and classifies traffic, flags anomalies, and exports reports — built to practise detection engineering.

CTF Solutions Log

TryHackMe / picoCTF

Offensive Security

Documented write-ups covering web, binary, and network challenges; sharpening pentest methodology and tooling.

CERTIFICATIONS & LEARNING

- TryHackMe

SOC Level 1 (in progress)
- Cisco

Introduction to Cybersecurity

Linux

LPIC-1 (studying)

AWS

Cloud Practitioner (planned)
